### **Reports on Computer Systems Technology**

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. The Special Publication 800-series reports on ITL's research, guidelines, and outreach efforts in information system security, and its collaborative activities with industry, government, and academic organizations.

102 Abstract

This guide provides procedures for documenting and populating various data elements typically found within the contents of a mobile device, e.g., mobile phone, tablet, etc. The guide discusses techniques and considerations for preparing the internal memory of a mobile device for use in testing a mobile forensic tool.

Keywords

110 Computer Forensic Tool Testing; Digital Forensics; Federated Testing; Mobile Forensics

111	Acknowledgments
112 113 114 115 116 117 118 119	The authors, Rick Ayers, Benjamin Livelsberger and Barbara Guttman from NIST wish to thank colleagues who reviewed drafts of this document. In particular, our appreciation goes to Craig Russell and Jenise Reyes from NIST for their technical support and written contributions to this document. Our appreciation also goes out to Sam Brothers from The MITRE Corporation and Daren Melson for their assistance on technical issues that arose in our work. The authors would also like to thank all others who assisted with our review process.
120	Audience
121 122 123	The intended audience ranges from law enforcement to forensic practitioners and examiners testing and utilizing digital forensic tools often used in incident response and criminal investigations.

#### 1 Introduction

#### 1.1 Document Scope and Purpose

This guide describes how to populate a mobile device as part of testing a mobile forensic tool. It was built to be used with Federated Testing, but can also be used to populate a device for use with other test approaches. The Federated Testing project (https://www.cftt.nist.gov/federated-testing.html) is an expansion of the Computer Forensics Tool Testing (CFTT) Program at NIST which provides digital forensics investigators and labs with test materials for forensic tool testing. The goal of Federated Testing is to help digital forensics investigators to test the tools that they use in their labs and to enable sharing of tool test results within the digital forensics community. The goals of this guide are twofold: 1) provide guidance for how to populate (place test data on) a moble device for use in forensic tool testing and 2) provide guidance to select data elements for inclusion that ensure effective testing.

There are two strategies for populating mobile test devices, e.g., mobile phones, tablets, etc.: 1) populate a new or previously sanitized device or 2) start with a used device and add content as needed. This guide first describes the major data types and how to populate them onto the test device. Appendix B is both a template that should be filled out for each device to document the device's content prior to testing and a specification of properties that each data element should meet. This "ground truth" provides the "expected results" for checking the ability of the tool being tested to obtain all of the device's contents. Appendix C is a sample of a template filled out with appropriate data elements.

This guide will step you through populating and documenting your test devices. This needs to be done for each mobile device. You should select data types that are relevant to the cases seen in your lab. You do not need to include all of the data types. You can include other relevant data types by adding a section to Appendix B.

Used devices may include numerous data elements (e.g., contact entries, call logs, text messages, pictures, etc.). While a device may contain hundreds of a specific data type (e.g., contact entries), users should concentrate on documenting a representative portion of data elements with the required data properties relevant to testing within <u>Appendix B</u>. You only need to populate data where the data element does not already exist.

#### 1.2 Document Organization

The guide is divided into the following sections and appendices describing how to document/populate data for a mobile device and a SIM/UICC:

- Section 2: Document Device Data
- Section 3: Personal Information Management (PIM) Data: Contacts, Calendar & Memos
- Section 4: Stand-alone Data Files
  - Section 5: Call Logs
  - Section 6: Text Messages
- 210 Section 7: MMS Messages
- 211 Section 8: Location Data

212	•	Section 9: Browser/Email Data
213	•	Section 10: Social Media Data

- Section 11: Other Applications of Interest
- 215 Section 12: SIM/UICC Card
- 216 Appendix A: Acronyms

224

225

226

227

228

- Appendix B: Mobile Device Data Documentation provides users with guidance on specific data properties for each data element type and a blank template to be used to document target mobile devices and/or SIM/UICC data.
- Appendix C: Mobile Device Data Example offers example data values that may be used to populate a target mobile device and/or SIM/UICC.

NOTE: The status of data populated onto a mobile device and/or a SIM/UICC may either be classified as Active or Deleted. Deleted data objects may be recovered by a mobile forensic tool if they are not overwritten. To prevent overwriting of data objects that are intended to be recovered, do NOT delete data objects populated onto a mobile device and/or SIM/UICC until data population has been completed.

For a more in-depth view on data population refer to CFTT's Mobile Device Data Population Setup Guide <a href="https://www.cftt.nist.gov/documents/Mobile Device Data Population Setup">https://www.cftt.nist.gov/documents/Mobile Device Data Population Setup</a> Guide.pdf.

261

232	2 Document Device Data
233 234 235 236	Document the equipment (i.e., IMEI) and subscriber (i.e., MSISDN/phone number) data by navigating to the mobile device <i>Settings</i> menu. The <i>Settings</i> menu is often identified by a gear shaped icon. Equipment and subscriber data may be in a subfolder such as <i>General</i> or <i>About Phone</i> .
237 238 239	Note: For mobile devices that allow for easy battery removal - the IMEI is also commonly located on a sticker within the battery cavity beneath the battery. For some makes/models of mobile devices the IMEI can be retrieved by entering: *#06# on the keypad.
240	Document Device Data in Appendix B.
241	
242	3 Personal Information Management (PIM) Data: Contacts, Calendar & Memos
243 244 245	Populating PIM data onto a mobile device does not require an active cellular subscription. Although, if network connectivity can be established, synchronization of supported data elements with an email account speeds up this process.
246 247	Different methods exist for data population, such as manual input or synchronization with an email account.
248 249	Synchronizing data from an existing email account to a mobile device requires network connectivity. Support for this method will vary based on make/model of the device.
250 251 252 253 254	Note: Synchronization of Contacts, Calendar and Memos with an existing email account may be accomplished by enabling specific data types within the mobile devices email client settings. Once this data is enabled, and the email account is accessed from the mobile device, the sync process should occur. It is recommended to set up a unique email account designed specifically for data synchronization.
255 256	Note: Non-Latin text (Non-English, e.g., Chinese, Arabic, Russian, etc.) can be readily created with language translation tools from a web-browser and then copied and pasted.
257	Document the PIM data in Appendix B.
258	
259	4 Stand-alone Data Files

Stand-alone data files (e.g., audio, graphic, video) can be populated onto a mobile device using

its native applications (i.e., camera, microphone).

262 Note: If the mobile device has network connectivity, stand-alone files (audio, graphic, video, 263 documents, etc.) may be populated onto the target mobile device by downloading them from an 264 email account. 265 Document Stand-alone Data Files in Appendix B. 266 5 Call Logs 267 When populating mobile devices with call log data, it is useful to obtain two devices. A sending 268 device, and a target device. Missed calls are populated onto the target device by placing a call 269 270 from a sending device and not answering from the target device. Incoming calls are populated 271 by answering the call from the target device and documenting the date/time and the duration of 272 the call. Outgoing calls are placed from the target device to secondary lines. 273 Document Call Logs in Appendix B. 274 275 **Text Messages** 276 Populating mobile devices with text messages requires two mobile devices. A sending device, 277 and a target device. Text messages may be categorized as either Short Messages Service (SMS) 278 or Enhanced Message Service (EMS) messages. 279 SMS messages are solely textual based messages containing less than 160 characters. EMS 280 messages are an extension of SMS and support text messages of 160 or more characters. 281 Incoming messages are populated onto the target device by sending the message from a sending device. Outgoing messages are populated by sending a message from the target device to a 282 283 secondary device. 284 In addition to the text message, document phone numbers, date/time, and the status (i.e., read, 285 unread, deleted). 286 Note: Text messages are categorized with a status of either: Read, Unread, or Deleted. To 287 establish messages with a status of read, open and observe the message on the screen. 288 Messages with a status of Unread are accomplished by not reading/opening the message. 289 Messages with a status of Deleted are accomplished by deleting a specific message after the 290 phone has been entirely populated. 291 Document Text Messages in Appendix B.

293	7 MMS Messages
294 295 296	MMS messages are populated onto the target device similar to text messages as described above in Section 6. MMS messages contain either an audio, graphic or a video attachment - with or without a text message.
297 298 299 300 301	Incoming MMS messages are populated onto the target device by sending MMS (audio, graphic, video) messages from a sending device. Outgoing MMS messages can be created using native applications (i.e., camera, microphone) and populated by sending a message from the target device to a secondary device. In addition to the text message, document phone numbers, date/time, and the status (i.e., read, unread, deleted).
302 303 304 305 306	Note: MMS messages are categorized with a status of either: Read or Unread. To establish messages with a status of read, open and observe the message on the screen. Messages with a status of Unread are accomplished by not reading/opening the message. Messages with a status of Deleted are accomplished by deleting a specific message after the phone has been entirely populated.
307	Document MMS Messages in Appendix B.
308	
309	8 Location Data
310 311	Location related data is populated onto a mobile device by enabling location services. Initiate a GPS related application from the target device, enter a destination and begin the route.
312 313 314 315	Pictures and videos may also contain location related data. The mobile device's camera security settings will determine if this feature is supported. For devices supporting "geotagged" pictures and video, populate the target device by taking photographs and video while documenting the location.
	iocation.
316	Document Location Data in Appendix B.
317	
316 317 318 319 320 321	Document Location Data in Appendix B.

324	Document Browser/Email Data in Appendix B.
325	10 Social Media Data
326 327	Mobile devices support a variety of social media applications such as: Facebook, LinkedIn, Twitter, and Instagram.
328 329 330 331 332 333 334	Individual social media accounts can be created from either a personal computer or mobile device with network connectivity. It is recommended to create two social media accounts (e.g., mobile_1, mobile_2). Creating two accounts provides the user with the ability to populate the target device with dialogue such as personal messages (PMs) between the two accounts. In addition to PMs; faux profile information (e.g., high school, college, employer, current city, hometown), picture albums, status updates, profile pictures, video, etc. should be created by accessing both accounts (for each social media app) on the target device.
335 336 337	Available features of each social media application will vary. Typically, applications provide users with the ability to create a profile (picture, background information, etc.) of the account and to share status information that may or may not include: pictures, video or audio files.
338	Document Social Media Data in Appendix B.
339	
340	11 Other Applications of Interest
341 342 343 344	Other types of application related data (not covered in sections 2 - 10) may be populated to a mobile device (e.g., reminders, wallet, cloud storage, productivity, organization, etc.). Consider populating a mobile device with application data critical to your casework. Selection of apps should focus on ones that are not covered in previous sections.
345	Document Other Applications of Interest in Appendix B.
346	
347	12 SIM/UICC Card
348 349 350 351	The make and model a mobile device determines if data i.e., Contacts/Abbreviated Dialing Numbers (ADN), Last Numbers Dialed (LND) and text (SMS, EMS) messages may be stored on a SIM/UICC. Newer devices typically store this information within the mobile device internal memory.
352 353	If the target device has a SIM/UICC card capable of storing ADNs, LNDs, SMS, EMS data; manually populate the SIM/UICC by performing the following:

354	1)	Export Contact information from the internal memory of the device to the SIM/UICC.
355		This typically is done by clicking on a Contact/Address book entry and selecting
356		copy/export and selecting the SIM as the location.
357	2)	LNDs – place outgoing calls from the target device.
358	3)	Incoming text messages (SMS, EMS) – send messages from a secondary device to the
359		target device.
360	Note: L	Oocument subscriber and equipment related data (e.g., ICCID, IMSI) after successfully
acquiring the contents of the target SIM/UICC.

Data Objects	Data Properties	Data Value/Sender/Receiver phone
Data Objects	Data Properties	number/Date/Time
CMC/EMC	Incoming	
SMS/EMS	Incoming	The following SMS message is a read
Messages	SMS/Read	incoming message sent from another
		device / (301) 555-0102 / April 12, 2017
		3:15pm
	Incoming	The following SMS message is an unread
	SMS/Unread	message sent from another device / (301)
		555-0102 / April 12, 2017 3:16pm
	Incoming	This is a deleted incoming message sent
	SMS/Deleted	from another device / (301) 555-0102 /
		April 12, 2017 3:17pm
	Incoming	Incoming read active extended SMS
	EMS/Read	message. This is an incoming SMS
		message that exceeds 160 characters. This
		message will determine if the forensic
		application properly reports all characters
		contained in the message. / (301) 555-0102
		/ April 12, 2017 3:17pm
	Incoming	Incoming unread active extended SMS
	EMS/Unread	message. This is an incoming SMS
	Livis/ Circua	message that exceeds 160 characters. This
		message will determine if the forensic
		application properly reports all characters
		contained in the message. (301) 555-0102 /
	Tu a a mai m a	April 12, 2017 3:18pm
	Incoming	Incoming deleted extended SMS message.
	EMS/Deleted	This is a deleted incoming SMS message
		sent from another device to determine if
		the forensic application has the ability to
		acquire and report deleted incoming SMS
		messages. / (301) 555-0102 / April 12,
		2017 3:20pm
	Outgoing SMS	The following SMS message is an active
		outgoing message sent to another device /
		(301) 555-0101 / April 12, 2017 3:20pm
	Outgoing group	The following SMS message is an active
	SMS	outgoing group message sent to multiple

Data Objects	Data Properties	Data Value/Sender/Receiver phone number/Date/Time
		recipients / (301) 555-0101 and (301) 555-
		0102 / April 12, 2017 3:21pm
	Outgoing	This is a deleted outgoing message sent to
	SMS/Deleted	another device / (301) 555-0101 / April 12,
		2017 3:21pm
	Outgoing EMS	Outgoing active extended SMS message.
		This is an outgoing SMS message that
		exceeds 160 characters. This message will
		determine if the forensic application
		properly reports all characters contained in
		the message. / (301) 555-0101 / April 12,
		2017 3:22pm
	Outgoing group	Outgoing active extended SMS message.
	EMS	This is an outgoing SMS message sent to
		multiple recipients that exceeds 160
		characters. This message will determine if
		the forensic application properly reports all characters contained in the message. /
		(301) 555-0101 and (301) 555-0102 / April
		12, 2017 3:23pm
	Outgoing	Outgoing deleted extended SMS message.
	EMS/ Deleted	This is a deleted outgoing SMS message
	Divis/ Deleted	sent to another device to determine if the
		forensic application has the ability to
		acquire and report deleted outgoing SMS
		messages. / (301) 555-0101 / April 12,
		2017 3:25pm

Table 16: Multi-media Messages example

<b>Data Objects</b>	Data Properties	Data Value/Sender/Receiver phone number/Date/Time
MMS Messages	Incoming audio MMS	Incoming sound byte message <i>attachment:</i> audio file / (301) 555-0101 / April 12, 2017 4:00pm
	Incoming graphic MMS	Incoming graphic message <i>attachment:</i> graphic file / (301) 555-0101 / April 12, 2017 4:01pm
	Incoming video MMS	Incoming video message <i>attachment: video</i> file / (301) 555-0101 / April 12, 2017 4:03pm

Data Objects	Data Properties	Data Value/Sender/Receiver phone number/Date/Time
	Outgoing audio MMS	Outgoing sound byte message <i>attachment:</i> audio file / (301) 555-0101 / April 12, 2017 4:07pm
	Outgoing graphic MMS	Outgoing graphic message <i>attachment:</i> graphic file / (301) 555-0101 / April 12, 2017 4:09pm
	Outgoing video MMS	Outgoing video message <i>attachment: video</i> file / (301) 555-0101 / April 12, 2017 4:12pm

**Table 17: Location Data example** 

Data Objects	Data Properties	Data Value
Navigation (Device	Waypoints	Longitude/Latitude coordinates
Specific)	Checking In	Social media
	Pictures/Video	Geotagged
	Trip	Trip Advisor

Table 18: Browser/email data example

Data Objects	Data Properties	Data Value
Bookmarks/History/Email	Visited Sites:	History of various sites navigated to
	Bookmarked Sites:	Active and deleted entries
	Email data:	Cached data to the phone

Table 19: Social Media related data example

	Table 13. Social IVIC	edia related data example
Data Objects	Data Properties	Data Value
Profile information, Status updates, personal messages, etc.	Facebook/Facebook messenger	Profile related data (picture, bio), Status updates, personal messages, etc.
	Twitter	Profile related data (picture, bio), Tweets, personal messages, etc.
	LinkedIn	Profile related data (picture, bio), personal messages, etc.
	Instagram	Profile related data (picture, bio), Posted pictures, videos, etc.

Table 20: Other applications of interest example

Data Objects	Data Properties	Data Value
Application related data	Application 1 (e.g., reminders)	
	Application 2 (e.g., Productivity)	
	Application 3 (e.g., Organization)
