Security & Privacy at the IRS

September 19, 2002

Len Baptiste

SECURITY SERVICES

- Balance user and security needs.
- Work with MITS and Business to better define security roles and responsibilities.
- Three executive-led security offices.

SECURITY POLICY SUPPORT & OVERSIGHT

- Focus on 15 security capability areas in the Treasury/IRS Security Assessment Framework.

- Direct support to security policy governance processes.

- Lead on post 9/11 physical and operational security initiatives.

MISSION ASSURANCE

- Enhanced security incident response capabilities.

- Emergency preparedness capabilities.

- New certification and accreditation strategies.

MODERNIZATION SECURITY

- Oversight of PRIME security activities.

- Direct support to BSMO in oversight and acceptance of ELC security deliverables.

- Ensures adequacy of security architecture and engineering in integration of modernized and installed systems base.

4

PRIVACY ADVOCATE'S OFFICE

- Ensures that IRS policies and programs incorporate taxpayer and employee privacy concerns.

- Enable business owners and system developers to identify and evaluate privacy risk through the Privacy Impact Assessment tool.

- Communicate privacy objectives to the public and their representatives.

DISCLOSURE OFFICE

- Reviews systems under certification for compliance with the Privacy Act and IRS confidentiality requirements (UNAX).

- Makes determinations on whether a new Federal Register system of records notice is required.

SAFEGUARDS OFFICE

- Provides security guidelines, IRS PUB 1075, to agencies and outside contractors that process, store, or transmit federal tax information under the provisions of Internal Revenue Code Section 6103.

- Provides onsite reviews of recipient facilities for compliance with safeguard requirements.

SECURITY AND PRIVACY AT THE IRS
Terence H. Lutes

September 19, 2002

- The IRS Restructuring and Reform Act of 1998 (RRA98) is a major force behind IRS e-file

  - It requires that 80% of all Federal tax and information returns be filed electronically by 2007

  - Electronic account access by 2007, if secure

  - This sets the IRS GPEA-equivalent goal

- Although IRS is exempt from GPEA, efforts are very much the same

  - Plans for accepting forms, schedules and other information collection instruments electronically

  - Plans to accept electronic signatures

  - GPEA reports to OMB

Individual Taxpayers:	2001	9/12/02
Practitioner	28,929,694	33,175,715
On-Line	6,825,036	9,407,970
TeleFile	4,419,449	4,176,464
Total	40,174,179	46,760,149
4868 (Extensions)	312,534	636,215
Fed/State	15,210,640	19,207,894
Credit Card	296,996	275,377
Direct Debit	455,044	363,448
IRS.Gov Hits (Billions)	2.53	3.05

Business Taxpayers:	2001	2002
940	748,465	764,538
941 *	4,090,402	4,832,470
1041	1,445,223	1,559,365
1065	7,735	20,963
1065 (K-1s)		2,178,794
1120		Being Developed

EFTPS (FY)	60,860,453	58,258,853
FIRE	327,496,987	375,400,705

* (2nd Qtr 2001, 4-1 to 6-30)

- E-Services
  - Registration/application
  - PTIN application
  - Indirect channel management
  - Transcript delivery

  - Electronic account resolution
  - TIN matching

- Modernized E-File

- E-Government
  - EZTax
  - Expanding Tax Products for Businesses
    - Business returns (1120, 94x, 8850)
    - Online EIN
    - Harmonized Wage Reporting, SPEF, Standardized EIN

e-file

EFTPS

- Cost and Complexity
  - Practitioner, On-line (consumer)
  - Software and transmission (practitioner/software co.)
- Technical Infrastructure
  - 1960's legacy, 1985 e-file design
- Taxpayer Adoption
  - Individual/business
  - Marketing challenge
- Security and Privacy
  - Taxpayer concerns same as consumer concerns
  - Concern about third parties
  - Good messages but hard to deliver

- <u>Authentication:</u> a security measure designed to establish the **validity** of a person, system, transmission, etc.

- <u>Signature:</u> an act undertaken by an individual to indicate the person's **identity**.

- Establishes the identify of a person or subject

- Requires registration with, and validation by, a third party

- Is used at the <u>beginning</u> of a transaction before rights or privileges are granted

- Binds together: the contents of the signed object, the signer's identity and the signer's intention to accept

- Does not usually require prior registration or enrollment

- Used <u>after</u> a transaction to determine accountability in the event of a dispute

- It's a Privilege to Participate - Not A Right

- Undertake a Stringent Application and Certification Process
  - Suitability Check Process
 - Participation Rules
  - Monitoring

- **Individual E-File:**
  - Approve the practitioner

  - Approve the software/transmitter

  - Authenticate the transmitter/software/ practitioner

  - Authenticate the Taxpayer/Signature

  - Accept the Return

- **Business E-File:**
  - Approve the software/transmitter

  - Approve the Practitioner

  - *Determine Company Signature Authority*

  - Authenticate the transmitter/software/ practitioner

  - Authenticate the Taxpayer/Signature

  - Accept the Return

TRDB

- **What We Have Tried:**

  - Digitized Signatures Pad

  - IRS generated Personal Identification Number (PIN)
  - PKI with Practitioners

- What We Are Using Today For Individual E-File:
  - Form 8453
  - Practitioner PIN
  - Self-Select PIN

- What We Are Using Today for Business E-File:
  - PIN issued by CDB (94X only) (Terry -- we validate according to the EIN)
  - Form 8453

- Alternatives being discussed:

  - Voice signatures

  - PKI in certain instances

  - Credit/debit smart cards

Are any, of these what I expect in an electronic transaction?

- Electronic signature needs to be as easy as signing a paper return.

- For the taxpayer authentication/signature on a tax return should be no more complex than making a purchase from a commercial web site.

- **<u>Use of Data by a Third Party</u>**

  – Section 7216 requires taxpayer consent in each case to use data stored by the practitioner/preparer.

  – Anything not covered by Section 7216 is covered under the Gramm Leach Bliley Act (Public Law 106-102)

- Basic processing the same as current on-line e-file

- Are requiring third-party privacy/security certifications
  - Challenge is identifying acceptable certifiers
  - Security certification of particular concern due to potential cost for small companies
