Cybersecurity Educational Standards.

There is a wide range of educational standards and ongoing efforts in the context of Cybersecurity, including the findings of recent working groups such as the 2009, 2010, and 2011 ACM ITiCSE Working Groups. The purpose of this session is to further the discussion among the various stakeholders from academia, industry, and government on recent developments and findings, the need for defining a comprehensive body of knowledge, and the opportunities and challenges faced in establishing new degree programs or educational pathways, especially between two- and four-year institutions.
