"Using the NICE Cybersecurity Workforce Framework: Introduction, Evaluation, and Application".

NICE has developed a cybersecurity workforce framework to provide a common taxonomy and lexicon for cybersecurity work and workers. After a comprehensive introduction to the work categories, speciality areas, competencies, tasks, and skills that compose the framework, the opportunity will be yours to evaluate and apply it. Participants will be introduced to the methods by which the framework was peer-reviewed and will conduct their own reviews, providing valuable feedback to the framework's continued evolution. Participants will also learn to overlay the framework atop existing, internal terminology, create rigorous training catalogs, and streamline hiring and career development.
