SSDS - Secure Software Distribution System

by

Lauri Dobbs
SSDS Project Leader, LLNL
(510) 423-8590 or e-mail dobbs1@llnl.gov

sponsored by

DOE Energy Research

This work was performed under the auspices of the U.S. Dept. of Energy at LLNL under contract no. W-7405-Eng-48.

The Goal of SSDS

"To provide an automated means to rapidly evaluate, distribute, and install software security patches in a secure fashion on a large number of networked multi-vendor computers."

Results:
Greatly enhanced system security and integrity.

SSDS Motivation

- ❖ Maintenance of computer systems is a significant portion of the cost of ownership. SSDS reduces the this cost by providing transparent system administration.
- ❖ Multi-vendor computing environments are the norm not the exception. SSDS is vendor independent: it will work with any vendor's computing systems.
- ❖ System administration is labor intensive and requires specialized knowledge. SSDS leverages the skills and time of system administrators.
- ❖ Networked computer systems are vulnerable to viruses, trojan horses, and other malicious software. SSDS provides a comprehensive mechanism to evaluate and validate system's software of networked computers.

Upgrades - The Ugly Reality

Patch conflicts and contingencies abound

CSTC 97-009 SSDS

Computer Security Technology Center 6

SSDS Objective

A centralized service providing intelligent and flexible automation in ...

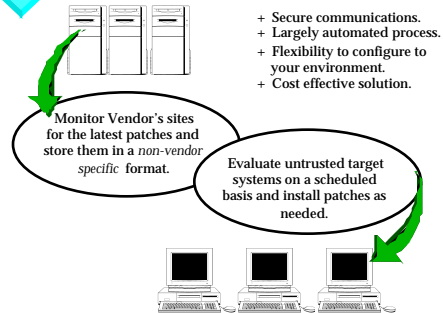

- ❖ Notification of new vendor security patches
- ❖ Determination of patch applicability
- ❖ Installation of security patches/software
- ❖ Ability to cleanly "back-out" patches/software
- ❖ Rapid site-wide patch status metrics and queries

with authenticated and data-protected connections to the target systems.

SSDS Approach

CSTC 97-009 SSDS

Computer Security Technology Center 8

SSDS Advantages

- ❖ Centralized service.
- ❖ Largely an automated process.
- ❖ Flexible to fit any environment.
- ❖ Vendor independent.
- ❖ Ensures the integrity of the system software.
- ❖ The price is right!

Computer Security Technology Center 10

SSDS is Vendor Independent

- ❖ Vendor's patches are converted to a standard machine-readable patch format.
 - We are starting to work with the vendors to adopt a patch standard format.
- ❖ SSDS is implemented in Java.
 - "Write once, Run anywhere."
 - Tested prototype on Sun Solaris.
 - Test on other UNIX flavors when Java 1.1 is released.
